Professor Ferdinand Sauerbruch became famous for a special surgical technique that he had developed. As a surgeon, he had rather clear-cut ideas regarding the characteristics and quality of the surgical instruments he used. It was not easy to meet his high standards. The well-known surgeon turned to Zepf, an instrument manufacturer in Seitingen that back then was still a rather young company, to produce the surgical instruments he wanted, as well as special prototype arm and leg prostheses.

Isidor Zepf, who had founded the company in 1921, and his wife Rosa, who was surely one of the first female surgical instrument makers, were able to produce the Berlin professor's products the way he wanted. Their - back in those days - somewhat unusual collaboration built the foundation for Zepf's successful development effort and demonstrated what is even today Zepf's hallmark: rapidly implementing innovations in the field of medical instruments, working in collaboration with well-known physicians and developing these innovations into exemplary solutions. What had been a manufacturing plant with modest beginnings began to grow due to the growing demand for medical instruments.

Helmut Zepf senior and Helmut Zepf junior developed the company in the following decades to a leading manufacturer of dental instruments in Germany.

AESTHETIC IS THE RESULT

MADE  IN GERMANY

Craftmanship since 1921

Today we are still a family company, managed in the fourth generation by Patrick Zepf. Our decisions are still based on the strict maintaining of basic standards and Zepf's quality criteria and high innovation. A family needs a home. The home of the Zepf family of course is Seitingen-Oberflacht where we reside since 1921.

Here we can count on the extensive technical know-how of our employees, many of them proving their loyalty to us for decades, since it is well known that this particular region of Baden-Württemberg is a hotbed of inventiveness and creativity. Last, but not least, Tuttlingen and the surrounding area has managed to remain the center of the world's medical-equipment industry, thanks to its abundance of well-trained skilled workers. It is companies like Helmut Zepf, to mention just one example, that have been standing for that reputation in the field for more than three-quarters of a century.

Consistent with our corporate philosophy, we see ourselves as driver of innovation. In the footsteps of others we cannot improve. We consciously take into account that a development is allowed to fail.

Loyal customers who appreciate our innovations are our reward.

Thank you for your confidence!

The "New Generation Handles"

Z-SHAPE RELAX

The **Z-SHAPE** Relax handles were designed according to ergonomic knowledge for the optimal working process during the curettage. The handles are coated with the new **ZEPF nanopal®** coating. The black-coated **ZEPF nanopal®** curettes have a durable, very hard surface which is very aggressive and sharp-edged, due to their crystalline nanostructure. With the unique coating, the surface hardness is increased to an unprecedented **4500 Vickers**. The black, scratch-resistant surface is easy to clean and prevents unpleasant light reflections. As usual, the instrument tips are interchangeable due to the M4 x 0.5 mm thread. **QUICKFIX®**

Mouth Mirrors

Due to the standardized thread dimensions, all mirrors available from **HELMUT ZEPF** are compatible with any handle supplied by **HELMUT ZEPF** and can of course be disinfected and sterilized by all usual methods. For fitting handles, please refer to pages **02-03**, **02-05** and for the fitting **ZEPF BIONIK** Handle, please refer to page **03-03**.

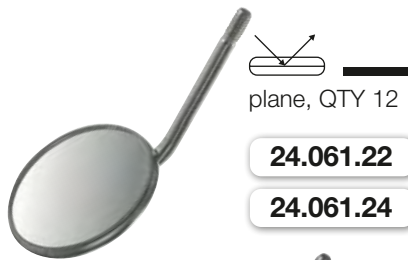

Lipcare Mouth Mirror acc. to Dr. Preusse

The Lipcare Mouth Mirror / Retractor Combination is distinguished by the following features:

- optimal ergonomic working for the user
- patient-friendly, atraumatic, extensive retraction of the cheek
- Titanium Mirror, Ø 24 mm, for best visibility
- possibility of preparation with all usual cleaning methods
- sterilizable up to 273° F / 134° C

Cheek Holding Mirror – open shape

The brightest and sharpest mirror in the world with optimized cheek holding. The quality features are:

- highest reflection for brilliant brightness
- superior color accuracy, without any color distortion
- precisely sharp mirror image
- scratch-resistant
- optimized cheek holding

Back Surface

These mirrors have their reflective coatings on their rear surfaces.

Front Surface

These mirrors have their reflective coating on their front surface, yielding undistorted imaging with no disturbing double images.

Light, manufactured from top-quality plastic with a satin surface finish, ergonomically designed, flexible, suitable for ultrasonic cleaning, sterilizable, and compatible with any standard insert with an M2.5 metric thread.

37.445.01 QTY 1

Retractor acc. to Hilger

This retractor's ergonomically curved surface allows retracting cheeks and tongue under all kinds of working conditions and is also very comfortable for patients, thanks to its convex rear surface and rounded edges.

Interchangeable Probe Tips

Probe Tips, interchangeable. Compatible with any standard handle with an M2.5 metric thread.

The two **ZEPF** Safety Keys to exchange tool ends are illustrated on page **03-05**.

For fitting handles, please refer to pages **02-03**, **02-05** and for the **ZEPF BIONIK** Handle, please refer to page **03-03**.

ZEPF Retractor and Mouth Mirror
acc. to Dentist Beck

The **ZEPF BIONIK** Retractor and Mouth Mirror is available in two sizes, featuring a heart-shaped, ergonomic and highly polished design.
The instrument is available in size 24 and 27 mm.

It is universally applicable as:

- Mouth mirror, cheek or tongue retractor, mucoperiosteal flap retractor.
- Its innovative heart shape allows ergonomic adaption in all quadrants.
- Due to its reflective surface, the retractor allows an optimal illumination of the surgical site.
- The large contact surfaces make the retractor very patient-friendly.

ZEPF Photography and Cheek Retractor, in the Onyx Version or stainless steel

HELMUT ZEPF Cheek Retractors are frequently used in intraoral photography, in extensive cheek retraction, in dental diagnostics and in surgery.

Conventional retractors are also available in plastic material. However, depending on the used plastic, these are not always entirely harmless when being prepared in the hygiene chain. Our retractors are made of stainless medical steel and fulfill all the requirements of the RKI guidelines.

The ergonomic design of the retractors guarantees an optimal handling and is well accepted by patients.

ZEPF Dental Tweezers

All **HELMUT ZEPF** Dental Tweezers have guide pins that prevent their tips from crossing.

The broader version with its shorter tips allow an application with more pressure compared to common tweezers.

ZEPF Ergonomic Dental Tweezers

Our extra comfortable **HELMUT ZEPF** Ergonomic Dental Tweezers are pleasant to hold and have been specially designed for use in extended, otherwise tiring, applications.

The broader version with its shorter tips allow an application with more pressure compared to common tweezers.

ZEPF Medical Probes

Those **HELMUT ZEPF** Probes shown in figures **8, 9, 17** and **23** are available in octagonal and cylindrical versions, both of which are pleasantly lightweight. Our ergonomically designed octagonal handles are comfortable to hold, and provide precision fingertip control.

Their thin, unbreakable, yet flexible tips manufactured from special alloy steel have an extremely long service life.

bionik ZEPF
PIOUK
ZEPF Periodontal Probes

The perio-diagnostics should be done regularly to have a permanent record to make sure that gingival and especially periodontal inflammations are diagnosed at an early stage.

The benefit for the patient is that either the periodontal health can be confirmed or infection is detected early. Like that suitable dental treatments can be initiated to cure the infection or to stop the progression. With the new Contrast PA Probe Inserts an even easier visualisation is guaranteed during the examination.

The graduation (3 mm) of the probe is visible at the deepest point of the sulcus of all measuring points. Calculus or defective restoration margins cannot be detected, the gingiva is healthy, no bleeding after (careful) probing = no treatment necessary, further preventive care.

Deeper measurements (> 3 mm) indicate a gingivitis. According to the depth further evaluation and documentation must take place according to the rules of the PSI.

See page **03-08** for article numbers of the different **ZEPF** Contrast Probes.

HELMUT ZEPF M5 Curettes have a 1st shaft which is about 3 mm longer. The sharpened instrument tip is shortened as to allow a special subgingival curettage for tight and deep pockets as well as narrow root surfaces.

Contrast PA Probe Inserts

The new **ZEPP** Contrast PA Probes are made of plastic material and have a flexible working tip which adapts optimally to the anatomy of the pocket depth when measuring.

Color-stable, black markings on the white basic material guarantee a very good contrast for reading.

The sterilizable, exchangeable tips are available in different common graduations.

They are suited to determine the parodontal status and especially to be used on implants. Scratching of implant surfaces is avoided with these probes.

The tips are reusable until they bend, the color fades or the graduation is not readable any more.

Universal Handle Endo-Control

acc. to Dr. Carsten Franke

Due to its laser-marked measuring scale, the **HELMUT ZEPF** Endo-Control Mouth Mirror Handle allows a simple determination of the required working length. The measuring precision can be adjusted to 0.5 mm. The sandblasted surface reduces surface reflections.

Periodontal Probes

All **HELMUT ZEPF** Periodontal Probes are high-speed machined. Their tips are thus very fine and dimensionally accurate to within very high tolerances. All our PA-Probes have markings that are suitable for ultrasonic cleaning. Our WHO Periodontal Probes have spherical tips.

They are particularly ideal for:

- determining papillary
- bleeding indices, and their “stops” (the balls on their tips) prevent injuries when measuring the depths of pockets, i.e., they are more atraumatic than other types of PA Probes.

Periodontal Screening Index, PSI

For using the periodontal screening index, it is necessary to use the WHO probe. The steel ball at the distal end of the probe features a diameter of 0.5 mm.

The steel ball avoids not only injuries but allows to discover rough surfaces and edges of dental fillings. The first measurement area of the probe is a black 2 mm band, which shows the depth from 3.5 mm up to 5.5 mm. For further information, please check the relevant description of the periodontal screening index (PSI).

ZEPF **BIONIK** Gracey Special Curettes

HELMUT ZEPF Gracey Curettes are special Curettes that have just a single working surface or cutting edge, and are thus suitable for removing concretions or dental plaque only.

The **ZEPF BIONIK** Handles are available in 10 different colors.

See page **03-02** and **03-03** for article numbers of the different color and handle versions.

Gingivectomy Knives

Gingivectomy Knife, # K 15/16

24.437.01

Kirkland type. The concave sections of their contoured blades are particularly ideal for use in retromolar areas, while their tips are particularly ideal for use in interdental spaces in molar areas

Gingivectomy Knife, # GF7

24.437.02

Goldman-Fox, for long, diagonal, cutting paths. Their drop-shaped tips allow their use in retromolar areas as well

24.437.03

Gingivectomy Knife, # GF3

Goldman-Fox, lance-shaped, cutter for use in interdental spaces

24.437.04

Gingivectomy Knife, # GF11

Goldman-Fox, for use in the molar area. Sharply angled tips. Their very flat, long and slim lance-shaped handle allow fine cuts/incisions

24.437.07

Gingivectomy Knife, # 3/4

Merrifield type. Their flat, pointed, elliptical tips allow rapid and accurate rolling all the way from the ends of its tips down to the ends of their concave sections

24.494.00

This periodontic Chisel is ideally suited to remove bone materials,
as well as contouring bones

24.926.10

Magnetic Sticks

Once the first shaft is fixed in a right angle (use a vise with "Rounded Swing Head" for this purpose) the magnet stick is placed onto the facial surface. This will be carried out automatically. In so doing, you achieve the sharpening angle simply and accurately. As such you can now sharpen the curettes with precision.

Best results can be obtained with Natural Stone (Original Arkansas) and wetting slightly with Sharpening Oil 24.950.00.

24.926.75

24.751.179

Anatomical Plate Forceps
for all Endo purposes

Anatomical Plate Forceps acc. to Dr. Dirk Brozio

The full area contact generated by compressing the tweezers, ensures a safe support in each gripping angle. The Plate Forceps are featuring a much higher safety when gripping, holding and positioning fine and delicate objects. This problem has been solved by the patented design of the Plate Forceps as their working tips have circular surfaces with additional serrations inside. Easy and relaxed handling due to low holding forces to allow a safe and fast treatment.

22.107.21 Anatomical Plate Forceps 180 mm

22.031.08 London-College 150 mm

19.561.13

Nerve-Canal Pliers

Nerve-Canal Pliers for grasping fractured root-canal instruments or silver pins. The very fine, concave cutout on the working tip allows to remove even deep-lying fractured files.

19.649.60

Surgical Aspirator

with Luer Connector, curved, optimal for Endo-Tips, 175 mm long, Ø 4.2 mm

24.074.13 Ø 3.0 mm

24.074.15 Ø 5.0 mm

24.074.16 7.0 x 2.0 mm

Micro Mirrors

Micro Mirror with rhodium front surface coating, for a distortion-free mirror image, without double reflection.

The Micro Mirrors are excellent aids in microsurgery and endodontics. Suitable for usage with enlarging glasses or OP-Microscopes.

All mirrors fit into commercially available mouth mirror handles with a diameter of M2.5 mm (see page 02-02).

Plugger for the vertical condensation technique in endodontics

19.509.10 Endo Plugger 3/5, yellow color marking = 3°, red color marking = 5°, length of the tips 28 mm, Ø 0.3 mm and Ø 0.4 mm

19.509.20 Endo Plugger 7/10, blue color marking = 7°, grey color marking = 10°, length of the tips 28 mm, Ø 0.5 mm and Ø 0.9 mm

Peet Splinter Forceps

The Peet Splinter Forceps is a clamp with perfect grip due to diamond coating. The universal S-curve, as known from La Grange Scissors, makes it particularly flexible in usage. The Peet Splinter Forceps 22.523.90D has a stronger curve (90°), which increases accessibility into the molar areas.

22.523.13 11.5 cm, diamond coated, La Grange curved

22.523.90D 11 cm, 90°, diamond coated, La Grange curved

Root Canal Instruments

All figures are very flexible.

MADE  IN GERMANY

The instruments illustrated in this catalogue are subject to modifications regarding technical progress and improvements.

Scale

ZEPF **BIONIK** Composite Sets

All Composite Tips feature the special **ZEPF** Onyx coating.

The reflection-free **ZEPF** Onyx coating is extra smooth, harder and more scratch-resistant than conventionally coated composite instruments. The popular handles in the **ZEPF BIONIK** design are made of lightweight, high-quality plastic material.

The **ZEPF BIONIK** Handles are available in 10 different colors. See page **03-02** and **03-03** for article numbers of the different color and handle versions.

CompoSMOOTH

THE SURFACE IS THE KEY...

Re-creating the original tooth as faithfully as possible is a challenging task for the material, the dental technician and the dentist. In case of direct composite restorations, the complete esthetic responsibility lies in the hands of the practitioner. Optimal instruments are the key to success.

19.201.11

19.201.21

19.201.31

Soft Application Inserts for layering technique

CompoSMOOTH Complete Set in the box incl. Washtray 1/3, with Brush Holder, 3 x 12 Soft Application Inserts and 4 Composite Instruments

19.200.00

Brush Holder **ZEPF**-Line with push-out function

The new **CompoSMOOTH**, a special silicone brush, allows an effortless adaptation and modelling of the composite surface before polymerization. Even “sticky” composites can be adapted in an optimal way. The perfect surface morphology is created almost automatically by light pressure. The tooth shape is modeled in a way that reduces the subsequent polishing work to a minimum... and the result – optimal!

Brush Holder 30°
Optionally available

HELMUT ZEPF developed this brush holder which is bent by 30° to get an optimal result in difficult-to-reach places. This instrument is not included in the set, but it can optionally complete the set in a profitable way.

19.200.30

Brush Holder curved 30° **ZEPF**-Line with push-out function

ATTIN Compo Knives

to remove composite residues in filling treatment

With the ATTIN Compo Knives in the **ZEPF bionik** Handle, instruments have been specially developed for removing composite filling residues. Coated with **nanopal®** these instruments have a surface hardness of 4500 Vickers. Every dentist removes composite filling residues in different ways. Some use curettes, others excavators and sometimes scalpel blades are used. Curettes and scalers are usually too weak, i.e. there is a high risk of breakage. Scalpel blades have a high level of hardness, are correspondingly sharp and are good to use. But there are only a few angles available, so they do not allow ergonomic working.

The new ATTIN Compo Knives have addressed this requirement, i.e. strong blades manufactured at the correct angles, so all quadrants can be optimally reached.

With the new **ZEPF nanopal®** coating, the surface has a hitherto unknown hardness. The cutting performance is therefore guaranteed for a long period. Should an insert ever become blunt, it is easy to replace only this instrument insert.

Advantages:

- Only two instruments for all quadrants
- **ZEPF nanopal®** coating for maximum cutting performance and lifetime
- Instrument inserts are exchangeable
- Glare-free surface

24.710.010X ATTIN Compo Knife for buccal and lingual surfaces, in **ZEPF bionik** Handle black, exchangeable inserts with **nanopal®** coating

24.710.020X ATTIN Compo Knife for mesial and distal surfaces, in **ZEPF bionik** Handle yellow green, exchangeable inserts with **nanopal®** coating

reddot design award

Micro Composite Spatulas – superfine spatulas with **ZEPF nanopal®** coating

In the case of direct composite restorations, the entire aesthetic responsibility lies in the hands of the practitioner.

With the new micro-composite spatulas in 1.1 mm and 1.6 mm, the practitioner is provided with highly flexible ultra-fine spatulas for precise modeling of delicate structures.

The new **ZEPF nanopal®** coating offers you a very good contrast to the used material. The polished surface is easy to clean and extremely scratch-resistant.

Perforated Anatomic EHRICKE for Lower Jaw

A-Silicone putties can be applied in perforated impression trays, as the perforation intensifies the rotation of the material in the impression tray.

Impression Trays for Implantology acc. to Helfgen

- simple handling
- open and closed implant impression
- putty-wash impression possible
- precision enhancement
- also universally usable in case of special indications
- only one impression session required
- sterilizable
- different sizes
- time and cost efficient

Functionality of the Impression Trays for Implantology acc. to Helfgen

1. In the area of the prepared teeth, retraction cords are placed. Smooth, retention free screws are twisted into the implants.

2. On its lateral sides the covered tray is coated with adhesive. Then the tray is charged with putty material.

3. For the primary impression, the charged tray will be pressed until the cover rests on the smooth implant screws.

4. After the removal of the primary impression, the smooth screws will be exchanged for the complete impression posts.

Lower Jaw

Perforator

5. The tray cover is removed and the impressed screw channel is extended with the perforator.

6. For undisturbed repositioning, the perforated channel may be extended further using a super-coarse mill.

7. After the impression areas have been surrounded by lighth-body material, the repositioned impression may be filled additionally via the perforations of the cap channels, if required.

8. Once the material has cured, the positioning screws are loosened, and the finished impression can be removed.

Brush Holder DBGM

Its most important features...

Our **ZEPF** Brush Holder is used for applying liquid treatment agents (enamel or dentine adhesion agents, acids, lacquers, or fluoridation agents) to dental surfaces or cavities.

1 Reverse-angle instrument

2 Back-action-instrument

3 Straight instrument

19.199.00

Brush Holder

Its features at a glance

- Includes a dual brush receptacle and an original **ZEPF** scaled handle.
- Universal use on both upper and lower jaws and on all dental surfaces and cavities.
- No need for plastic applicators (reduces waste).
- May be disinfected and sterilized by using any standard procedure.
- Virtually unlimited service life.
- Designed for optimal ergonomics and general-purpose use.
- Suitable for all regular brush inserts (single use).
- Used in all areas of dentistry, especially adhesive restoration work.

BIONIK Retraction-Thread Plugger

Retraction threads are placed to repress or retract the gingiva from the tooth neck.

Prior to taking an impression for the preparation of crowns, the thread is adapted around the prepared tooth and the gingiva.

The **ZEPF BIONIK** Instruments feature specially adapted shapes, helping the dentist to place the threads in a time-saving way; this is useful as threads are tending to get thinner.

BIONIK ZEPF **reddot design award**
winner 2010

BIONIK Universal Handle made of PEEK high-tech plastic material – guarantees an ideal power transmission with formerly unknown sensitivity. The handle is available in 10 different, fresh basic colors.

The exchangeable working tips inserted in the ergonomic **BIONIK** handle offer highest economy and best tactile handling.

24.548.01 Universal Thread Plugger with angled working tips, micro serrated

24.548.02 Suture Applicator for distal / mesial use, micro serrated and specially adapted to anatomy

24.548.03 Suture Applicator for buccal / lingual use, micro serrated and specially adapted to anatomy

24.548.04 Universal Thread Plugger with round tips, micro serrated

EASY CONTACT POINT Instruments by HELMUT ZEPF

26.123.01 3.1 mm wide, in **BIONIK** Handle, black

26.123.02 3.8 mm wide, in **BIONIK** Handle, yellow-green

EASY CONTACT POINT Hand Instrument
for premolars, for perfect forming of
contact points in MO or DO restorations

EASY CONTACT POINT MOD Pliers
for perfect forming of contact points while
preparing a composite restoration

26.122.00 MOD Pliers for premolars

26.122.10 MOD Pliers for molars

Composites are not easy to process. The modeling of clinically ideal contact points in particular is a big challenge for the practitioner. The Easy Contact Point Instruments will help to simplify this work step.

These instruments are available in two sizes as pliers for MOD filling, i.e. as premolar and as molar pliers. To be used as hand instruments for MO or DO fillings. Also available in two sizes for premolars and molars. The treatment period for a composite filling can therefore be considerably reduced.

The related economic benefit is evident.

Universal Finishing Clamp "Work smart not hard"

The **ZEPF** Finishing Clamp is an innovative holding instrument for finishing strips of all kinds. The instrument has been designed with ergonomics and functionality uppermost and contributes significantly to easing work involving finishing strips.

The treatment is pleasant for the patient because the tongue area is not restricted by the dentist's fingers and does not aggravate choking. Its main application is in the area of approximate composite fillings; apart from this the instrument is well suited for separation, the correction of filling surpluses in approximal area as well as the application of dental floss.

**Fields of Application:**

- 1) Completion of approximal composite fillings.
- 2) Separating by means of steel-carbon strips or diamond skived steel strips.
- 3) Correction of filling over-hangs in the approximal area.
- 4) Removal of matrix strips after laying fillings.
- 5) Clamping dental floss for interdental plaque removal, especially in difficult access spots in the lateral tooth area.
- 6) Clamping dental floss for removal of cement residues from the interdental area after cementing crowns / bridges.

Benex[®] II Extractor
acc. to Dr. med., med. dent. Benno Syfrig

Extraction System

Benex[®] II

acc. to Dr. med., med. dent. Benno Syfrig

Pursuing logically the quest of gentle extraction, **HELMUT ZEPF** Medizintechnik GmbH has developed a new, patented (Pat. No. CH 696 458) **Benex[®]** extraction system in close collaboration with Benno Syfrig Dr. med., med. dent from Switzerland. You will find further information, application examples and the **Benex[®]** user forum at:

www.benex-dent.com

Picture 1

Picture 5
Longitudinal extraction with **Benex II** step by step:
Alveolar ridge,
12 weeks after extraction

Extraction System

Benex II

acc. to Dr. med., med. dent. Benno Syfrig

In modern dental treatment, implantology following extraction is increasingly favoured. Consistent with the principle of minimal invasion, conserving soft and hard tissue structures is a must. Starting with extraction. The modified **Benex II** guarantees a gentle and simple extraction of roots in the whole mouth. It is nearly impossible to harm the soft tissue and the surrounding bone. Due to the longitudinal extraction, **Benex II** is an optimal basis for direct implantation. It is also a valuable help for retarded implantation after the extraction with the **Benex II** system. Studies made after the use of **Benex II** prove that the reossification of the extraction alveole is advancing optimally. This is a great advantage for the retarded implantation.

The new **Benex II** is now available in a washbasket complying with the RKI guidelines. That way, the requirements of optimal cleanability and sterilization were taken into account. You will find further information, application examples and the **Benex II** user forum at: www.benex-dent.com

12.302.00 **Benex II** Extraction System

12.303.00 **Benex II** Basic Kit

Alveolar Ridge Preservation with **Benex® II**

What does it mean?

Alveolar Ridge Preservation means the treatment of the dental alveolus after extraction. 3 months after the **Benex®** extraction you find a considerably better ridge relation than with conventional gentle extractions.

The **Benex®** finds its successful application in both, private practices and universities. The **Benex®** has achieved an excellent status worldwide as basis for a subsequently successful implantation.

The new support for the dismantled **Benex®** System in a washbasket guarantees an optimal cleanability of **Benex®** in a washing machine or in an ultrasonic bath. All components can be fixed safely in the support.

Upon cleaning, the system can be sterilized in assembled condition.

In addition to the **Benex®** components, an optional periosteum, an Xtool and an optional **Benex®** Pole Extractor can be placed in the support.

Application of the Extraction System

1. Anaesthesia. Cutting periodontal fibres (Sharpey fibres) in the sulcus by using the Periotome or the **HELMUT ZEPF Xiod**.

2. Strong, large roots must be loosened / luxated by axial movements within 30 sec., using a slim elevator / twister (**Xiod** from **HELMUT ZEPF**). Without using transversal movements. In case of multi-rooted teeth, the roots are divided and extracted separately.

3. Drilling with the diamond coated twist drill should be in the axis and center of the root fragment. It should be approx. 7 mm in the hard tissue, deeper drilling will not be necessary. Drilling is performed with water-cooling. In order to remove drilling chips more easily, an inward and outward movement is recommended for deep drilling.

Recommended rpm:
500 - 700 rpm

REF 12.300.30 max. 3000 rpm

REF 12.300.35 max. 2200 rpm

4. According to circumstances, the short or long extraction screw with screwing support **REF 12.300.47** is inserted.

5. The extractor is positioned on the adjacent crowns: The opening of the round, revolvable segment plate is adjusted in vestibular direction ensuring a good view of the extraction screw. After the pullrope has been hooked into the extraction screw, it is guided over the reverse roller and fixed to the hook of the extraction slide. Under slight traction – so that the rope does not hang out – the instrument is placed on the adjacent teeth by turning the hand screw. During positioning it is important to see that both the screw and the rope do have the same axial direction.

6. Once the extractor is positioned properly, the extraction is carried out by turning the hand screw. In case of strong, long roots the periodontal fibres have to be pre-stretched for 30 seconds by applying a sub-maximum traction.

ZEPF *Xcision*
Dr. Maty Design

The exclusive design and 25% reduced weight make the **ZEPF Xcision**-Instrument-Line light as a feather.

The ergonomic handle design enables uniform power transmission during pressing, pulling and rotary movements and is equally suited for both right handed as well as left handed practitioners. The unique tip design adapts exactly to the tooth and is beyond comparison to other instruments.

The smooth handle with circular openings makes the **ZEPF Xcision**-Instrument-Line extraordinarily easy to be cleaned since there are no more hygiene-critical zones as with instruments with serrated handles.

The ideal handling and tactual sensation is guaranteed.

From design to functionality, this product line answers all your concerns. The **ZEPF Xcision** Handle is a registered model of **HELMUT ZEPF**, which has been developed with Dr. Maty.

Extracting Forceps

Pattern

All figures from **HELMUT ZEPF** are available in the **Xcision** Pattern

Diamond-Coating

All extracting forceps are available with diamond-coating for better grip. For ordering etc. just add to the item number the letter **D**.

Teflon Disc

The wear-resistant Teflon Disc eliminates wear and tear in the joints and provides a light action at all times.

Grooved Gripping Surfaces

Grooved gripping surfaces provide a secure grip and prevent slipping.

Secure-Line

Our special **HELMUT ZEPF** Extracting Forceps in our modern **ZEPF Xision** Design have tapered jaw tips. Their fine, sharp tips which have been anatomically shaped to match perfectly the teeth and allow to reach deep and large contact areas, which in turn provides better mechanical advantages and a more secure grip. Since these special **HELMUT ZEPF** Extracting Forceps have been designed for performing luxations, they have longitudinal grooves only on their jaws' gripping surfaces. The easy handling and superior "feel" of all our **ZEPF Xision** Lines of Extracting Forceps are of prime importance for this product line!

Rescue-Line

No reason to panic! These forceps will allow you to carry out any extraction and work more efficiently even under complicated circumstances.

If teeth break during extraction, these are the tools you need to rapidly, safely, solve your problems.

These forceps have special all-purpose jaws designed to cover a broad range of applications and have sharp pointed tips that allow separating the tips of roots from surrounding tissue by slightly twisting them and then securely trapping the extracted roots in the gaps between their jaws.

The article numbers of extracting forceps with serrated edges are amended by 'ZS'.

Pedodontic Extracting Forceps

These pedodontic extracting forceps have been designed to be as small as possible in order to avoid frightening younger patients with large, aggressive-looking instruments, thereby providing relaxed working conditions.

Further RoBa-Design Pedodontic Extracting Forceps are illustrated on page 05-32!

ZEPF **roba** EDITION PATENTED

onyx
DESIGN

ZEPF RoBa-Edition

by dentist Beck

Dedicated to the long-standing employees Mr. Horst Roos and Mr. Reinhold Bacher, who worked for Helmut Zepf for more than 50 years since their time as trainee.

The **ZEPF** RoBa-Edition completes the innovative advancement of the famous **ZEPF Xision** Extracting Forceps. It has been developed under the aspects of a secure and gentle appliance.

The problem of tooth fractures during extraction is considerably reduced due to the innovative geometry of the beaks.

The new **ONYX** coating makes the impact-resistant surface of these extracting forceps almost indestructible.

Compared with other methods, in **ONYX** coating the carrier material is applied in a more gentle way, as **ONYX** coating in comparison to other coatings is performed with significantly less influence of heat.

The surface shows excellent sliding features to reliably counteract contamination. An incrustation of proteins etc. is not possible.

The matt-finished black surface not only prevents reflection of the OT light, but also guarantees an optimal contrast in the OR environment during extraction.

ZEPF

ZEPF roba EDITION PATENTED

With the patented RoBa-Edition **HELMUT ZEPF** introduces a new generation of extracting forceps. Deduced from the **ZEPF Xisio** Instruments the RoBa-Edition has been especially developed in consideration of easy and gentle extraction.

The patented RoBa-Edition according to Dentist Beck is the consequential advancement of conventional extracting forceps with the advantages of the tapered deep-grip extracting forceps. The modified beaks according to Dentist Beck fit exactly on the teeth which ensures a maximum grip in the appliance. These new beaks are available for all figures in upper and lower jaw (incisors, premolars, molars and wisdom teeth).

Due to the fact that all teeth show a convex crown contour (upper jaw: labial, buccal, palatal and in lower jaw: labial, buccal, lingual), the beaks have been developed under this anatomical conditions. The handle is a protected design from **HELMUT ZEPF**, which was developed in cooperation with Dr. Maty, Germany.

- ① The serrated jaws grip onto into the teeth and avoid a “riding” in-between the tooth crown and the inner contour of the beak.

- ② Concavely elaborated inner contours of the forceps beak fit in the convex tooth contour. With deep grip in the alveolus on the neck of the tooth or on the crown, the RoBa Edition ensures a parallel and maximum grip in any situation. Root fracture almost can be excluded.

- ③ The different deeply elaborated inner contours ensure maximal adaptation on the teeth in different actualities. No tilting of the teeth while rotary and / or lifting movement.

- ④ Tapered outside contour of the beak affords deep grip even subgingival.

Black Finish Coating

Design meets functionality.

Users with highest demands will appreciate the elegant, black finish providing the instrument with a non-reflecting, extremely smooth and scratch-resistant surface. The article number is complemented by **Tl**.

1

12.234.07ZTI PATENTED

Diamond Version

All RoBa-Edition extracting forceps in the classic satin-metallic finished surface are available with diamond coating for a better grip.

The lower part of the ZEPF Xision Handle is gold-plated. For ordering etc., just add a **D** to the article number.

EDITION
PATENTED

The wear-resistant Teflon® disc eliminates wear and tear in the joints and provides a light action at all times.

Refreshingly Innovative

The new generation of extracting forceps in the patented **ZEPF exLOG** Design was designed to meet the special requirements of gentle removal of teeth. To meet these requirements, we composed a programme of 11 extracting forceps figures out of more than 400 existing figures. These were chosen according to anatomy, ergonomics and hygiene.

exLOG Extracting Forceps

34A

3.2.1. | 1.2.3.

15.034.01

35A

5.4. | 4.5.

15.035.01

The **exLOG** Forceps offer an excellent anatomic fit and only need enough pressure so they do not slip out of the hand. The forceps guarantee a balanced axial luxation, better periodontal fibre dilatibility and increased sense of touch. They reduce traumata of surrounding tissue.

The assimilated handles allow an individual and equal power transmission for left- and right-handed surgeons during pressing, pulling and turning movements.

Due to the smooth handles and the possibility of dismantling, the **exLOG** Forceps can be cleaned extremely well. So there are no hygiene-critical areas any more like they are known from forceps with conventional lock. Especially with automatic reprocessing in a washtray the disassembly is a great advantage as they need less space.

All Advantages on One View:

- excellent anatomic adaptation on the tooth surface
- tapered beaks for less trauma and protection of the alveolar locus
- linear serrated jaws for equal axial luxation
- better fibre dilatibility and increased sense of touch
- optimal cleaning through the demountability of the forceps into two parts (RKI-compliant)
- long lasting, patented, high precision joint for radial and axial mechanical load
- made out of one piece (5-axis CNC-milling) for ultra high precision
- no maintenance of the joint necessary

Focus on the **exLOG**, the standard of tomorrow.

A NEW STANDARD IS DEFINED

EDITION

PATENTED

ZEPF EXLOG RoBa Edition Extracting Forceps

With the new **exLOG** RoBa Edition **ZEPF** introduces a new generation of patented extraction forceps. Two patented extraction forceps are combined into one.

The EXLOG Forceps characterized by the fact that it's easy to disassemble and the RoBa characterized by its patented jaws.

It made sense to combine both patents as the combination results in a type of forceps which is easier to clean than ever before and additionally offers the dentist a functional extraction tool which leaves no desire unfulfilled.

These patented forceps are the consequent development of conventional forceps with the advantage of tapered and deep grip extraction forceps. The modified jaws exactly match the tooth and guarantee a maximum grip during the application.

ZEPF EXLOG RoBa Edition Extracting Forceps

This new development involves all figures for maxilla and mandible (incisors, premolars, molars and wisdom teeth).

As every tooth shows a convex crown shape (maxilla: labial, buccal, palatal – in the mandible: labial, buccal, lingual), the jaw was developed according to these anatomical conditions.

- excellent anatomical adaption on the neck of the tooth surface
- tapered jaws for less traumatization and for conservation of the alveolus
- better fibre dilatibility and increased sense of touch
- optimal cleaning due to the possibility to disassemble the forceps into two pieces (RKI compliant)
- long life time, patented, high precision joint for radial and axial pressure
- produced from one piece (5-axis CNC milling) and therefore ultra precise
- no maintenance of the joint

The following problems might occur if the extraction forceps are not suitable:

- root fracture
- crown fracture
- damage of the soft tissue caused by bruising
- damage of the alveolar ridge and the buccal bone lamella

Advantages of deep-grip extraction forceps:

- due to the specially shaped jaws it is easy to place the forceps subgingivally directly on the root (below the gingival margin)
- parallel contact on the root
- atraumatic, as the soft tissue is not bruised
- root fractures are avoided
- slim jaw design for subgingival grip without bruise of the soft tissues

Xtod Instruments

Xtod
Acc. to Dr. Detlef Hildebrand

THE ORIGINAL

In the illustrations an extraction under use of the Xtod Instruments is shown.

IMPORTANT: Complete removal of all inflammable and convective tissue structures.

- ① Initial loosening of the desmodontal fibres. Apply the X-Desmo-Tool first approximately then buccally and palatinally (pencil handle).
- ② Then progressive luxation with the X-Luxa-Tool (first narrow then wide). Ideal positions: Approximal (mesial or distal) to the tooth which should be extracted!
- ③ Complete luxation of an upper right molar with support of a wide X-Luxa-Tool. Gentle extraction without root fractures!
- ④ Inspection of the empty tooth socket and curettage with support of the X-Spoon.

Xtrod Instruments
Acc. to Dr. Detlef Hildebrand

THE ORIGINAL

The implantology with immediate insertion after the tooth extraction is more and more a focus of interest in modern dentistry. It appears to be more than necessary to protect soft and hard tissue structures already during the extraction phase and to follow the principles of minimal invasiveness. Here is an ideal complement for this:

The **Xtrod** Instruments! In contrast to existing instruments this clearly arranged and universal Xtool Set supports you during the gentle and uncomplicated extraction of teeth which cannot be preserved.

Modern therapy methods require modern instruments!

- Color coding for clear handling.
- Universal and complete extraction instruments in one tray.
- Ergonomic handle design (pencil-design) prevents unintended slipping during usage.
- Direct and controlled power transmission to prevent tooth and root fractures.
- Non-traumatic tooth extraction without injuring surrounding structures.

H-Tool Set
acc. to Dr. Hildebrand

H-Tool Set

acc. to Dr. Hildebrand

The new H-Tools developed by Dr. Hildebrand are a continuation of the successful X-Tool concept.

The instrument tips are very flat and sharp pointed.

The instruments are inserted along the root axis and the alveolar cavity is widened by advancing the H-Tool apically along the root of the tooth to be extracted with gentle hammer blows.

The light ferrozell hammer with a diameter of 35 mm enables work to be carried out safely.

Thanks to the extremely light construction, this hammer produces a far less unpleasant feeling in the patient than using a hammer with hard plastic inserts or in the worst case with a metal head.

Lucas Scraper, 2.5 mm, double-ended, 17.5 cm

41.855.01Z

■ **X-Desmo-Tool (yellow):**

The X-Desmo-Tool easily penetrates into the periodontal gap with its pointed tip and initially loosens the Sharpey's Fibres. The modified pencil handle and the handy shaft shape offer a depth sensibility like never experienced before without destroying related structures.

■ **X-Luxa-Tool-3 (blue):**

bent + narrow
for tooth loosening

■ **X-Luxa-Tool-1 (green):**

straight + narrow:
A delicate and controlled power transmission guarantees a specific loosening and luxation of the tooth without any risk of crown or root fractures.

Ideal position: approximal (mesial or distal) to the tooth which is to be extracted.

■ **X-Luxa-Tool-2 (green):**

straight + wide:
Complete, non-traumatic luxation of upper molars (e.g. tooth 16). The ergonomic instrument shape ensures a gentle extraction without tooth fractures or any damage to the alveolar wall.

■ **X-Luxa-Tool-4 (blue):**

bent + wide:
for tooth luxation

■ **Lucas Schaber ZEPF-Line:**

Inspection and curettage of the empty dental alveolus. Complete removal of all inflamed and connective tissue fibres.

26.182.24 Periotome P4 / straight Sharp Spoon Ø 3.0 mm
ZEPF-Line, double-ended, exchangeable inserts

ZEPF-Line Periotomes

For the Separation of the Sharpey's Fibers in the Sulcus

Before the usage of any root elevator or extraction forceps it is necessary to separate the Sharpey's Fibers in the sulcus with a periotome in order to do an atraumatic tooth extraction. To do so, the periotome is to be pulled through the sulcus.

The correct application saves the gingiva and the periosteum. The special design in the grip area guarantees a pleasant grip and extremely easy handling.

Root Elevators

Root elevators are used for the surgical tooth extractions. They are used to luxate the tooth in the osseous alveolus and to expand the alveolus walls. They are also used to open the gingival sulcus prior to the tooth extraction.

Straight instruments are used in the anterior region and in the maxillary area. Curved root elevators are ideal for the back teeth in the mandible.

The Workmanship

The shafts of **HELMUT ZEPF** Root Elevators are welded onto their hollow handles, and each and every one is checked for leakage at their welded joints.

This manufacturing method virtually eliminates the leakage compared to cheap root elevators with pressed-in shafts.

Modified Root Elevator Beck

Instructions

The elevator works during the luxation step with 5-7 supporting points (Hypomochlion), which avoids slipping through because of the different surfaces around the radius, instead of a common round-edged instrument, which works with 1-2 supporting points only.

This makes the Beck Root Elevator much more effective.

- ① Because of the elliptical shape of the instrument tip, it is easy to penetrate the interdental space with this instrument.
- ② Due to the shape, by turning the instrument through 180° it is possible to luxate in four directions: 2 x mesially and 2 x distally.
- ③ **Attention!** These instruments must not be used as a lever, as shown e.g. in picture 3. Due to the special shape, an over-strengthening of the tip can cause breakage. We cannot be held responsible for damages caused by improper use.

Heidbrink Root-Splinter Elevators

Root Elevator No. 195

The drop-shaped, blunt working end makes the new **ZEPF** Root Elevator No. 195 ideal for the separation and luxation of roots. The tapered working end allows its special use in the molar region in all quadrants. It can also be used for initial loosening of the desmodontal connection.

Due to its geometry and smooth luxation and rotary motion, the root fragment to be removed will be moved very easily in "crestal direction" (in relative terms!). The luxated fragment can therefore be grasped easily with deep-gripping forceps or with Luer bone rongeur forceps.

Lindo-Levien Root Elevators

The LINDO-LEVIEN Root Elevators are pushed into the periodontal gap in apical direction until the serrations will grip on the roots. The root is extracted via a barb effect by straight pulling without leverage.

Elevators for axial luxation

These elevators for axial luxation have been developed as an alternative to classic elevators. The instrument must not be used as a lever.

Furthermore the gentle removal of the teeth should be reached by **axial luxation** and cutting the Sharpey's fibres.

05⁰⁵⁻⁶⁰ Extraction

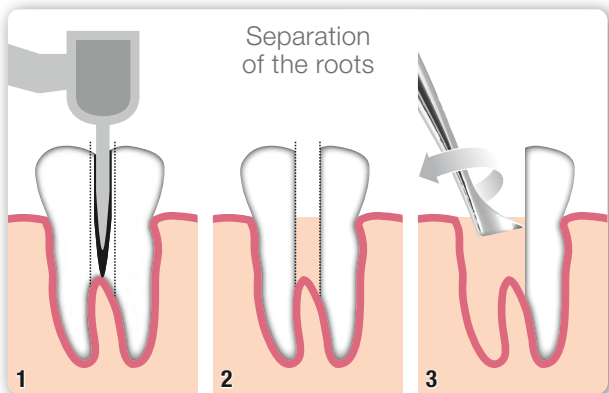

+49 (0) 74 64 / 98 88 0

Revolving Chisel Vienna Pattern

Root Elevators Cryer and Winter

Claw elevators are ideal to extract molars in the mandible after separation of the roots.

The bend of the working ends, combined with the shortened tips, allows a gentle lifting of the opposite root without contact to the neighboring crown.

The special claw elevators are ideal to luxate roots if an apical access is possible from the neighboring alveolus, e.g. if a root has already been removed and if the empty alveolus can be used as access. It is recommended first to remove the root which is bent less.

Atraumatic Tissue Forceps acc. to Dentist Beck

22.824.17 17.5 cm

Due to their specially shaped working tips, the Tissue Forceps allow an easy and gentle grip and fixation of the tissue flap. There is no additional traumatism of the soft tissue. The Atraumatic Tissue Forceps can be used in all fields of dentistry and odontology (in surgery, parodontology and implantology).

The **ZEPF** Retractor

pat. pend. by Dr. Peter Müller, Ebersbach

37.443.00 Retractor acc. to Dr. Peter Müller

Clear, non-tiring retraction in every situation

Retraction of the cheek, lips, tongue and mucoperiosteal flap.
The **ZEPF** Retractor is a “quality product from Tuttlingen” and bears the name **HELMUT ZEPF** as seal of quality.

- ergonomic handle
- low-weight, very well-focused instrument
- innovative design
- multipurpose usage
- good view
- smooth surface, manufactured from one piece
- all common disinfection and sterilization methods possible

Vestibulum Retractor

acc. to Dr. Müller, Tuttlingen

Working end made of stainless steel,
handle M4.5 mm,
Dr. Ti, made of titanium.

The Vestibulum Retractor acc. to Dr. Müller,
Tuttlingen can be used in the dental field
for all activities for which it is necessary to
have a very good view as well as the best
possible dryness.

The application in periodontology as well
as in oral surgery is possible as the
Vestibulum enables you to retract a com-
plete quadrant. This offers a very good
view on your field of work. The instrument
can also be used to model the edges in
the acrylic technique. The relative drying
is possible with one hand which offers a
better moulding.

The instrument can be used in many ways
and is very easy to apply. This makes it
very economical.

37.444.01

Special features of the

Maty Cheek and Lip Retractors:

- suitable for a wide variety of applications
- lightweight
- easy to use
- patient-friendly
- no traumatization of the oral cavity
- usable on upper or lower jaws
- ergonomically designed, saves time, thereby cutting costs
- does not need to be removed when work is interrupted since design prevents the dropping out

Maty Cheek and Lip Retractor

The light weight, versatility and anatomically shaped jaws of this instrument makes it suitable for use in a wide variety of applications in all areas of dentistry.

In prosthodontics, for safe impression technique, determining upper / lower jaw mismatches, fitting crowns, bridges, inlays, etc

37.454.00

Maty Cheek and Lip Retractor, 17.5 cm

- In orthodontics, for fitting brackets, etc.
- In general dentistry, for filling teeth, root-canal work, etc.
- In oral surgery, for outpatient surgery (apicoectomy, osteotomy, tumor and bone surgery, etc.), preprosthodontic surgery, traumatology, implantology (enossal implants, sinus lifting, GBR techniques, etc.)

Due to its diverse application possibilities and easy handling (no specialists required to retract lips, cheeks etc.) the retractor also contributes significantly to cost-efficiency.

Quality **MADE IN GERMANY**.

Our all-purpose cheek and lip retractor is yet another top-quality, high-precision, all-purpose instrument "Made by **HELMUT ZEPF** Medizintechnik GmbH".

ZEPF Vestibulum Retractor

acc. to Kapogianni

The **HELMUT ZEPF** Vestibulum Retractor according to Kapogianni is mainly used for the region of the lateral teeth in the upper jaw.

It is meant for the atraumatic holding of the prepared mucoperiosteal flap which is usually retracted in the area of the crista zygomaticoalveolaris. The crista often develops a distinctive osseous bow which makes it impossible to hold it away with a straight retractor.

This instrument is of great advantage especially during operations like the direct sinus lift, big augmentative interventions or other operations in the area from the cuspid to the rear lateral teeth.

Because of the three-dimensional arrangement of both retracting elements of this Vestibulum Retractor, the mucosa is retracted safely and a trauma due to continuous slipping is excluded. Of course, this retractor can be used for anatomically similar bone structures for safe and atraumatic working.

41.864.60 Raspatory, ZEPF-Line

Prichard

An arrester and raspatory, all in one.

Usable in all types of periodontic surgery, osteotomy, or root-tip resections. Its sharp, rounded tip is used for preparing papilla / loose tissue for excision. In periodontic treatments, its blunt tip allows arresting several flaps of loose tissue simultaneously. The curvature of its blunt tip makes it also a popular choice for osteotomies in the molar area (8-area), as well as for mirror rasps, since its contacting surfaces are highly polished. Lingual surfaces may be very easily reached.

ZEPF Blade Holder Drop-Control

The **ZEPF** Drop-Control® Blade Holder combines the design of the regular blade holder 46.007.00 with a new and revolutionary function. With reference to the mechanism of a ball pen, the blade will be dropped off by pushing the button at the end.

The object of this development was a simplified application with the same diameter of the blade holder. Therefore there is no need to adapt to a new application / ergonomics for our regular blade holder! The **ZEPF** 'Drop-Control®' Blade Holder perfectly fits into our **ZEPF** Design product range for surgery, implantology and microsurgery thanks to its diameter, design and ergonomics.

By pressing the button at the end of the blade holder the mechanism which lifts the blade is triggered off. The blade is pushed forward so that it falls safely and controlled in a tray or cup.

Controlled dropping of the blade

Afterwards the one-hand ejection function moves back in its initial position. After cleaning and sterilization you can insert a new blade – as usual.

The advantage lies in the fact that the used blade can be removed in a safe and controllable way in order to prevent a contaminated injury or infection.

ZEPF Onyx Scissors

The Onyx coating offers a 3-5 times higher surface hardness compared to traditional scissors. In combination with the "Supercut" grinding (see page 06-32), this guarantees an extremely long product life and application with very high precision and wear resistance.

The extraordinary surface smoothness is leading to an easy slide of the scissor blades even under highest strain. Due to the physical / chemical combination of the coating, no undesirable reaction will be caused during sterilization or usage of solvents. Furthermore, the anti-glare surface avoids disturbing light reflections.

The article numbers are complemented by **TISC**. For further information on the illustrated scissors, please refer to the following pages.

What is  ?

SC stands for "Supercut" and means that scissors with that designation have been specially ground, not only to make them sharper than ordinary scissors, but to yield a much better cutting angle (cf. the accompanying illustrations). One ring is golden.

What is  ?

TC stands for "Tungsten Carbide", a material whose superior strength wear resistance and hardness are its major properties that distinguish it from conventional materials. Both rings are golden.

Fine Preparation Scissors

The curved blunt Preparation Scissors are used for preparation in the least traumatic way of separating tissue into connective tissue layers.

The surgeon pushes the scissor parallel to the skin or to the level of the layers which should be separated (picture 2), opens the scissor and pulls it back in an opened position.

The tissue layers are separated by spreading movements of the scissor blades and the required layer is opened (picture 3).

The tip of the scissor is usually facing the less sensitive structures.

In the second instance the scissor is used for cutting.

ZEPF Bone Holding Forceps

acc. to Dr. Howard Gluckman

23.105.50

ZEPF Bone Holding Forceps
acc. to Dr. Howard Gluckman

Dr. Howard Gluckman

Specialist in Periodontics, Implantology and Oral Medicine
Director of Implant & Aesthetic Academy, Cape Town, South Africa

“Bone holding forceps that I have tried so far are always very difficult to handle and some require 2 hands to use them effectively. A big problem for me was that the forceps usually got in the way and made screwing the bone blocks into position difficult. This inspired me to create a bone holding forceps that allowed one to effectively hold the bone plate or the bone block and at the same time having adequate space for the bone screws and driver.

The holder is easy to use with one hand due to the ratchet design and firmly grips either the bone plate or block on its own, thereby allowing fixation of the plate at the desired distance from the bone; if you utilise the Khoury technique; or to hold both bone block and recipient site thereby enabling easy bone fixation. The bone vice is designed to work with both large and small blocks.”

Content: **ZEPF** ECO ImplTool Set

The **ZEPF** ECO ImplTool Set in cobalt-blue **24.961.05** or lightred-magenta **24.961.06**.

Out of his own experience Dr. Hildebrand came up with a complete instrument set for the whole oral surgery and the treatment in the implantology and periodontology. No matter if classical or new conceptions, like sinus elevation or microsurgical interventions, all demands can be covered.

Special raspatories, elevators and dissecting instruments enable and simplify surgical procedures and mainly non-traumatic operations. The exchangeable working tips inserted in the ergonomic **BIONIK** handle offer highest economy and best tactile handling.

Clearly organized in a washbasket – so everything is always easily at hand for the practitioner.

Bone Scraper

Collecting autologous bone material.

In oral surgery bone replacements and bone structures are often combined with autologous bone pieces during augmentations in order to use their osteoinductive effect. The Bone Scraper is the perfect instrument for an easy and quick collection of autologous bone structures. It enables you to scrape, collect and transplant the patients' own bone. Everything can be done without the usage of bone filter, trephine bur, saw or bone mill.

The blade makes a collection of cortical and spongy bone possible. The bone is collected in a chamber during the scraping and at the same time the bone is being mixed with blood. The bone material can be implanted directly out of the Bone Scraper which has been sterilized before.

ZEPF Bone Scraper II

By using the Bone Scraper, instruments like bone filters, trephines, saws and bone mills are no longer necessary. Its blades allow a fast harvesting of cortical and cancellous bone. The cost-efficient disposable blade offers the practitioner an always sharp and economical instrument.

Bone Splitting System
acc. to Dr. Vollmer & Dr. Valentin

Bone Splitting System

acc. to Dr. Vollmer & Dr. Valentin

A successful implantation primarily depends on sufficient bone in the region of the alveolar process and especially on the quality of the bone. Only a stable bone structure can guarantee a safe anchorage of the implant.

In addition to modern augmentation methods, the bone splitting technique is becoming more and more important.

The principle is based on the creation of a similar alveolar cavity in the maxillary crest with a good potential of regeneration.

For this indication, the experienced implantologists Dr. Vollmer and Dr. Valentin have developed exactly adapted system components for different anatomical situations in co-operation with the company .

At first, the maxillary crest which has become too small due to atrophy is being separated in its longitudinal direction by diamond discs. Thereafter, it is split carefully by means of chisels. In doing so, the lateral cortical bone lamellae are preferably displaced in labial direction.

After these preparatory steps, small wedges are inserted in the gap. In each case, two wedges are used as placeholders for the drilling of the implant bed and the insertion of the implant.

While drilling, the bone lamellae are reliably prevented from springing back. Upon insertion of the implants and removal of the inter-implantary wedges, the remaining gaps can be filled with augmentation material in order to allow an augmentation and, in opportune cases, an immediate and simultaneous implantation.

Back Action Chisel

Modified as Bone Scraper in different widths, to gain autologous bone during operation.

Bone Fitting Set

acc. to Dr. Hohl & Dr. Hildebrand

47.949.95

Bone chisels are used to gain bone chips, to shape bone structures and to widen bones from the cranial side. The pointed chisels are used for the first widening of the maxillary crest. The flat chisels smoothen and shape bone structures.

Content:

Hollow Cylinder Osteotomes acc. to Dr. Vollmer & Dr. Valentin

With the ejector, which will be positioned at the distal end, the gained bone material can be implanted efficiently in another place. Comparable with solid osteotomes it comes to a condensing of the bone in order to get a better primary stability for the implant in a cancellous bone.

PATENTED

Advantages of the VGO Osteotomes

- ZERO HEAT PRODUCED!
- ALWAYS PASSIVE ENTRANCE!
- DECREASED CRESTAL STRESS!
- FULL CONTROL OF RATE OF DILATION!
since hand-piece is not used at constant speed

- REVOLUTIONARY FLEXIBILITY OF USE
All Osteotomes on the market may look alike, but they are **not!** We offer a unique stepped formula for tip escalation and a revolutionary flexibility of use like no other system on the market.

3 MAIN MODES OF USE!

- ZEPF VGO MODE: PASSIVE ENGAGEMENT (Stepped Escalation)**
- ZEPF HYBRID MODE: PASSIVE ENGAGEMENT (Linear Escalation)**
- ZEPF STANDARD MODE: PASSIVE ACTIVE ENGAGEMENT / NON ENGAGEMENT not recommended**

Bone is Gold: PASSIVE WAVE DILATION SYSTEM

acc. to Pavel Krastev DDS

How do we manage the osteotomy ATRAUMATICALLY?
How do we manage the osteotomy for greater implant success? Bone is Gold, so how do we hurt the bone less? How do we mallet less, as to make procedure less unpleasant for our patients?

Let us control the bone as opposed to having the bone control us.

Because of the overlapping diameters of the VGO Osteotomes, you are able to passively engage the previously made intrabony cavity, even when you didn't use the full length of the tip.

PASSIVE ENGAGEMENT – successive osteotome fits freely into the previous intrabony cavity and becomes active at a point deeper than crestal bone, as is currently done by the new **ZEPF VGO** way.

PASSIVE ACTIVE ENGAGEMENT – when a traditional Summers Osteotome is used to full working depth of tool, the next tip will engage previously made intrabony cavity passively and will start being active immediately as it progresses further into cavity.

NON ENGAGEMENT – when next osteotome is used, it simply does NOT fit the intrabony cavity created by previous osteotome. This is what occurs when traditional Summers Osteotomes are used to partial depth of tip.

47.990.00

VGO OST-Set – straight, in a Washbasket with Lid (REF 85.194.22) containing:

ANTERIOR VGO OST-Set

with 7 straight screw osteotome inserts, numbered from 0-6

- Tips have first 8 mm threaded
- To produce micro cuts in bone
- Increased bleeding and better angiogenesis
- No malleting needed
- Tip-0 is unique in straight kit (Ø 1 - Ø 2 mm)
- Tip-0 to accommodate thin anterior ridges
- Provides precision marking tips for immediate placement

Included in both sets:

17.710.00

Z-Shape Universal handle & instrument holder for inserts with HEX-adapter, AF4, sandblasted, 2 pieces included in the set

Screw Osteotome Insert straight, size 6, tapered Ø 4 - 5 mm, convex shank Ø 5 mm, scale 8/10/13/16 mm

47.991.00

VGO OST-Set – angulated, in a Washbasket with Lid (REF 85.194.22) containing:

POSTERIOR **VGO** OST-Set

with 8 angulated osteotome inserts, numbered from 1-8

- No threads since turning motion limited
- 5 mm mark placed on all tips to mark threshold for crestal lift
- 5 mm is minimum available bone recommended for crestal lift
- Tips have same taper as tips 1-6 for straight kit
- Two additional tips (7 and 8) to accommodate wider ridges typically found in posterior area
- Provides precision marking tips for immediate placement

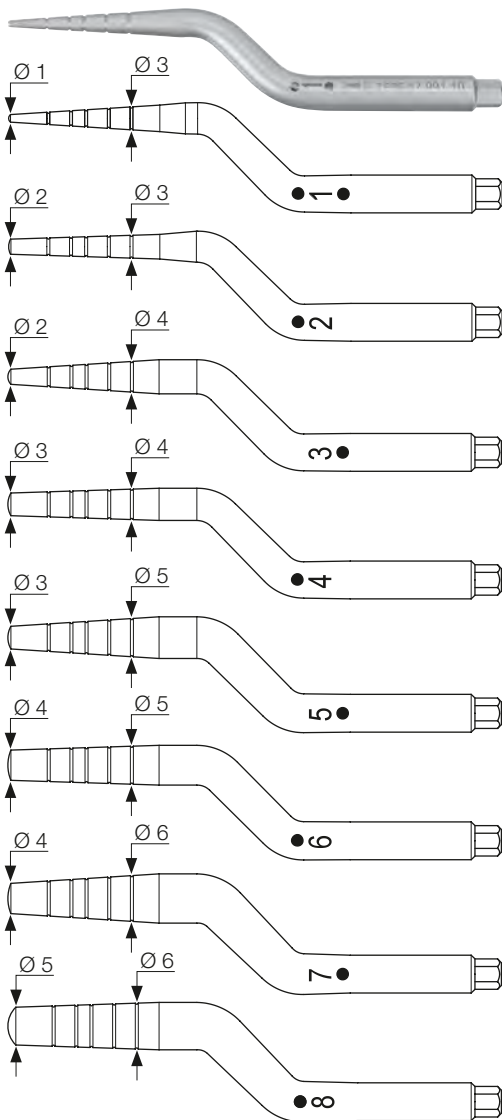

47.990.06

47.990.08

Application of the Precision Marking Tips

To be used during immediate placement surgery to initiate osteotomy offset towards palatal. Rotary drills usually slide down bone due to angle at which the osteotomy is initiated.

Angulated Osteotomes in the **VGO** OST-Set

Exchangeable with Hex Connection for Z-Shape Universal handle

- 47.991.10** Osteotome Insert angulated, size 1, tapered Ø 1 - 3 mm, convex shank Ø 3 mm, scale 5/8/10/13/16 mm
- 47.991.20** Osteotome Insert angulated, size 2, tapered Ø 2 - 3 mm, convex shank Ø 3 mm, scale 5/8/10/13/16 mm
- 47.991.30** Osteotome Insert angulated, size 3, tapered Ø 2 - 4 mm, convex shank Ø 4 mm, scale 5/8/10/13/16 mm
- 47.991.40** Osteotome Insert angulated, size 4, tapered Ø 3 - 4 mm, convex shank Ø 4 mm, scale 5/8/10/13/16 mm
- 47.991.50** Osteotome Insert angulated, size 5, tapered Ø 3 - 5 mm, convex shank Ø 5 mm, scale 5/8/10/13/16 mm
- 47.991.60** Osteotome Insert angulated, size 6, tapered Ø 4 - 5 mm, convex shank Ø 5 mm, scale 5/8/10/13/16 mm
- 47.991.70** Osteotome Insert angulated, size 7, tapered Ø 4 - 6 mm, convex shank Ø 6 mm, scale 5/8/10/13/16 mm
- 47.991.80** Osteotome Insert angulated, size 8, tapered Ø 5 - 6 mm, convex shank Ø 6 mm, scale 5/8/10/13/16 mm

3D One Step Augmentation & Implantation

acc. to Dr. Bernd Giesenhagen

In co-operation with Dr. Giesenhagen, the company **HELMUT ZEPF** has developed a new set for the One Step Vertical Augmentation with ring-shaped bone transplants.

The aim of this development is an accelerated implant treatment. Thereby, the safety of the implantological success as well as the convincing result for the patient and the user have priority. In many cases, this new augmentation method can be used to build up the bone base for the insertion of one or more implants.

Particularly suitable for the vertical augmentation of the highly atrophied and distal mandible (pic. 2). With this newly introduced technique, perfectly fitting ring-shaped bone transplants are removed from the chin-, retro-molar region or from the palatal area (pic. 1) by means of trephines and fixed immediately in the receiving area (pic. 3) with a screw implant.

3D BONE RING
technique

47.500.31

Complete Set with washbasket 85.184.18 and instruments; without optional accessories

Dr. Bernd Giesenhagen, the inventor of this procedure, and **HELMUT ZEPF** have selected a special range of instrumentation for precise and time-saving steps of treatment in order to ensure an optimal function.

Application

The local cortical bone structure with spongy parts of vital cells guarantees a safe fixation with short healing time.

The filling of possibly existing cavities is usually made by spongy chips taken from the donor area or by bone substitutes.

For an additional coverage of the augmented area with a barrier membrane we recommend our **HELMUT ZEPF** Augmentation Kit 47.966.00.

Metal Ring for Ring Applicator 47.099.25 – for holding bigger bone rings with Ø 9 mm

Trephines

Trephines are used for a gentle and precise removal of an implant. They are used to win bone texture and to excavate implants accurately. The trephines are manufactured of stainless steel.

The grading is visibly laser-marked onto the burs and guarantees a secure depth orientation.

The windows in the body offer a better view for the excavation of the implants and make it easier to reject fragments. The bur stand offers a safe and perfectly clean storing and easy positioning through a snap-in system.

The marking of the rack allows a fast and uncomplicated identification of the trephines.

ZEPF Bone Crusher

With this Bone Crusher we introduce a proven alternative to the more complex bone mill. Insert the bone piece into the crusher and use the Pusher in order to crush the bone. If necessary, you may additionally use the hammer 41.509.00.

47.955.00

Bone Crusher, Body, Sleeve, Pusher, Baseplate Ø 20 mm, stainless steel

47.955.10

Teflon Support for Bone Crusher
After using the hammer, turn the Pusher 90° and crush again. With this movement the cutting edge is turned on the bone. After that, the desired result should be achieved.

Bone Mill Forceps

For gaining autogenic bone material.

In order to correct bone defects, an intraoral harvesting of bone is often necessary. Pieces of bone may be gained with trephines or chisels. It is the aim of the Bone Mill Forceps to cut bone material into small pieces so that a maximum volume of bone chips can be achieved. The “grainy” consistency of bone chips created will ensure that it is adapted most favourably to osseous embedding.

47.958.03

Handle Bar with Screw

47.958.01

Upper Titanium Milling Part, rigid

47.958.04

Lower Titanium Milling Part, rotating

47.958.00

ZEPF Bone Mill Forceps, Titanium Milling Part, demountable

Advantages of the Bone Mill Forceps:

- Titanium Bone Mill Inserts
- Mill Inserts are detachable and exchangeable
- no loss of bone material
- conform to the RKI guidelines because of easy cleaning
- specially designed new forceps, which allow parallel closing of the working parts, which allows a maximum milling result
- stop screw avoids direct contact of the milling parts, due to this protection the milling parts will last longer

effect

47.954.35

Helical toothed Milling Part

for Bone Mill 47.954.01 and to be mounted in 47.954.00 / 47.954.01
(This new milling part can be ordered and subsequently be mounted
in an older type of Bone Mill by the user himself).

ZEPF Bone Mill

Bone Mill, to crush autologous bones. In order to correct bone defects, bone harvesting is necessary elsewhere. Bigger bone pieces or bone-blocks can be removed by using trephines.

The **ZEPF** Bone Mill allows to crush bone in order to produce the greatest possible volume of bone graft. The grainy consistence of the produced bone graft guarantees an optimal adaption on the bone.

The extension bar which can be adapted on the rotary handle facilitates an optimized power transmission and torque. The new Bone Mill with helical toothed milling part makes milling easier.

**Advantages of the
HELMUT ZEPF Bone Mill:**

- easy handling
- quick assembly / disassembly without additional tools
- no loss of bone material (even in the case of small quantities)
- easy cleaning

Sinus Elevators

acc. to Dr. Meiselbach

The 3 Sinus Elevators acc. to Dr. Meiselbach enable a gentle and atraumatic sinus floor elevation in all areas.

Due to their special shaping the Elevators are an ideal addition to the Universal Sinus Instruments.

41.848.51 Sinus Elevator 1 acc. to **Dr. Meiselbach**, 2.3 mm, blunt

41.848.52 Sinus Elevator 2 acc. to **Dr. Meiselbach**, 3.0 mm / 2.3 mm, blunt

Sinus Lift Instrument Set
for microscopically guided elevation of
the sinus bottom acc. to Dr. Shakibaie-M.
incl. 1 x washbasket 85.195.00 and
instruments illustrated on page 07-26/27

Microsurgical Sinus Lift Instruments

For microscopically guided elevation of the sinus bottom acc. to Dr. Behnam Shakibaie-M.

For the development of the new microsurgical sinus lift instruments acc. to Dr. Shakibaie-M., we resorted to the approved conventional shapes of sinus lift instruments.

The new instruments are approx. 60% smaller, they were sharpened and the surface was abraded. Under appropriate optical magnification and illumination of the operation field (operation microscope or magnifying glass), those features offer the following essential advantages:

- The reduction of the instrument size allows the preparation of a minimized antral window without restricting the qualities of elevation or augmentation.
- The sharpening of the instruments allows a precise initial fracture of the bone layer which is as thin as parchment. The initial fracture is possible as soon as the window is prepared by rotating the instrument, without injuring the Schneider's membrane.
- The delicate coarseness of the surface of the instruments prevents the unpleasant reflection of light from the operating microscope or the magnifying glass.

In addition, the working tips of the instruments were bent in accordance with the reduced sinus lift window.

Finally, the instruments were also numbered and color-coded to allow an easy, chronological use.

Thus, the surgeon is able to increase the safety during elevation of the sinus bottom and to apply this technique in a minimally invasive way for the patient.

Sinus Instrument Set acc. to Prof. Dr. Dr. Stiller

Immediate sinus floor elevation with or without bone cover

The Sinus Instrument Set has been developed together with Prof. Dr. Dr. Stiller and is particularly suited for difficult maxillary sinus structure (septa, maxillary pillars, scarred mutations in change with intact maxillary sinus mucosa).

Advantages of the system:

- Instruments which are adapted and adjusted perfectly to the anatomical conditions in the maxillary sinus.
- Flexible working ends. Instruments are pre-bended for the normal antral anatomy.
- Two different kinds of instruments with blunt and sharp edges for dissecting mucosa on plane and rough internal surface of the maxillary sinus.

Augmentation Kit

**47.966.00**

Augmentation Kit

Reasons for reconstruction of alveolar ridge arise out of defects in the jaw ridge areas. The most frequent causes are: Atrophy of the alveolar ridge and extraction defects.

Out of esthetic reasons alone, in visible areas, these defects need to be reconstructed.

The augmentation is carried out with autologous bone and titanium foil. The bone implants are covered with a titanium foil after application. To avoid dislocation of the augmentation material below the membrane, the membrane is fixed with at least 2 pins.

The titanium pins with 3 mm or 5 mm length are taken out of the storage box by means of the applicators and pressed into the bone through the foil or membrane.

**85.255.02**

Storage Box for 10 titanium pins, optional

ZEPF Augmentation Material Applicator

The Augmentation Material Applicator supports the fractional filling of the subantral area with particulate augmentation material. To compact the augmentation material you use a sinus plugger.

The instrument with diameter of 5 mm is loaded laterally.

The augmentation material can be applied precisely with the injecting mechanism.

The instrument can be taken apart for optimal cleaning.

Krekeler Sliding Caliper

Acc. to Prof. Dr. med. dent. Gisbert **Krekeler**
 Modif. Dr. med. dent. Sven Marcus Beschnidt

The Sliding Caliper combines a variety of functions in one instrument, thus facilitating the positioning of implants and enlarging the precision.

The measuring rods have a thickness of exactly 1.5 mm and allow immediate control of the maximum diameter of the implant which has to be inserted. (In order to assure maximum stability, please chose the largest diameter). Scientific examinations proved that the wall of the bone should have a thickness of at least 1.5 mm in order to avoid bone resorption after implantation. If the sliding caliper with its two measuring rods is inserted in the interproximal gap and opened in such a way that the measuring rods touch the respective root of the neighbor teeth, the maximum possible diameter of the future implant is shown on the marking IN. The upper marking OUT shows the determined outside dimension.

The new locating screw, at the end of the caliper, allows a fixation of the measured result. This practice-oriented development represents a significant relief with regard to a **more precise, quick and and secure work.**

31.693.10

Sliding Caliper acc. to Prof. Dr. med. dent. Gisbert **Krekeler** for measuring of implants with locating screw

OUT shows the determined outside dimension (Ø 1.5 mm), **IN** shows the inner diameter.

Locating screw for a safe fixation of the measured result.

The hole serves as drilling gauge and drilling guide. The marking allows the determination of the ridge.

Palatal Knife

acc. to Dr. med. dent. Iman Mizani, MS

The novel Palatal Knife offers an innovative alternative to the conventional scalpel for the preparation of connective tissue graft.

The special design of the instrument promotes faster and safer graft removal. At the same time, the risk of injury to the palatine artery and perforation of the palatal flap is minimized.

Special features:

- angled cutting edge, perpendicular to the palatal bone
- ergonomic, angled instrument neck / shaft
- depth gauge (graduation) for precise dimensioning

Advantages over conventional removal methods:

- enhanced safety through reduced risk of injury to the palatine artery and perforation of the palatal mucosa
- simple and ergonomic handling
- fast, precise preparation of the graft
- consistently uniform thickness of the connective tissue graft
- abrading work and cutting in difficult-to-reach places

46.040.15

Palatal Knife
acc. to Dr. med. dent. Iman Mizani, MS

Application:

① Singular palatal incision and formation of a flap

② Preparation to gain connective tissue, using the instrument

③ Dissection of the prepared connective tissue below the flap, removal of connective tissue as soon as the base is detached from the palatal bone

Implant Guide

for the posterior tooth region, according to Wiedemann

This method quickly and effectively finds the optimal position for the implants in the posterior region.

Here, a standard tooth width is assumed.

Premolars 8 mm, molars 10 mm, so 1/2 premolar = 4 mm,
1/2 molar = 5 mm

The standard tooth widths used are neither scientifically nor individually 100% correct, but these values deliver highly usable implant positions particularly on edentulous jaws.

31.683.00

Drilling Template
acc. to Wiedemann

Distance between drilled holes

- **8 mm:** From the center of one premolar to the center of the next premolar (1 x 4 mm + 1 x 4 mm), e.g. center of number 4 to center of number 5.
- **9 mm:** From the center of one premolar to the center of a molar (1 x 4 mm + 1 x 5 mm), e.g. center of number 5 to center of number 6.
- **10 mm:** From the center of one molar to the center of the next molar (1 x 5 mm + 1 x 5 mm), e.g. center of number 6 to center of number 7.

If no premolar is available as a starting point then a canine can also be used. For this, a distance between the mesial end of the working part and the first hole of exactly 4 mm was chosen (1/2 premolar width).

ZEPF Tunneling Instruments

2 NEW **ZEPF** Tunneling Instruments!

Tunneling Instruments with a new angle

By request of several users, the modified **BIONIK™** Tunneling Instruments from **HELMUT ZEPF** have now been supplemented with two new instruments. The instruments curved beyond the working tip allow even better access, especially in the posterior tooth region. Available in two sizes, depending on the extent of tunneling, the user can now select the ideal instrument for his / her purposes.

Micro Surgical Scalpel Handle 46.013.00Z
and Periosteal Elevator 41.864.30
(**ZEPF**-Line, round-tip 2.8 mm, lance-tip 2.4 mm)

ZEPF Tunneling Instruments

In microsurgery, **HELMUT ZEPF BIONIK™** Tunneling Instruments find their application in the preparation of flaps or subsequent reconstructions of the alveolar ridge or for root coverings with a connective tissue graft. The instruments allow a minimally invasive tunneling preparation to avoid large openings. Due to the fine shape delicate tunneling incisions in the tissue are possible.

Tunneling Instrument # 1, for upper jaw, 18 cm

Double-Action Instruments

22.830.17

Double-Action Micro Forceps, transmitted, **ZEPF-Line**, SpinLock
17.5 cm, 1 x 2 teeth, thread plate 10 mm, jaw width 0.6 mm, SpinLock

41.017.17

Double-Action Micro Needle Holder, transmitted, **ZEPF-Line**, SpinLock
17.5 cm, tungsten carbide, serrated, jaw width 0.6 mm, SpinLock

What is the ZEPF SpinLock?

The parallel lock known from standard needle holders has been replaced with the new SpinLock technology. This avoids that the suture material gets caught up on the needle holder.

conventional lock

SpinLock

The **HELMUT ZEPF** Double-Action Instruments are consisting of a Micro Needle Holder and a pair of Micro Forceps.

The instruments were technically modified in the region of the instrument lock. The usual parallel screw lock has been replaced by a new axially turned lock to reliably prevent the suture material from sticking to the needle holder during knotting.

Advantages of the Double-Action Instruments

- double transmission to allow tactile handling
- made of special stainless steel
- needle holder with tungsten carbide insert to guarantee a long service life
- due to the round shape, the rotation is considerably facilitated, in particular during suturing, contrary to usual flat micro needle holders
- the turned design prevents threads from getting stuck

onyx**ZEPF** Micro Scissors

Onyx-coated scissors offer a 3-5 times higher surface hardness. In combination with the "Supercut" grinding, this guarantees an extremely long product life and application as well as a very high precision and wear resistance. The extraordinary surface smoothness is leading to an easy slide of the scissor blades even under highest strain.

Furthermore, the anti-glare surface avoids disturbing light deflections. The extremely smooth surface prevents adhesion of proteins.

Suture Removal Scissors
acc. to Dentist Beck

The newly developed **HELMUT ZEPF** Suture Removal Scissors are combining two functions in one instrument.

Sectioning and Retaining

The curved micro scissors won recognition for periodontal microsurgery. They are qualified for controlled cuts in the soft tissue and their main task is the sectioning of the suture (ill. 1).

They are curved for an ideal access to all oral regions. One blade of the scissors is micro-serrated to prevent the soft tissue and the thread from slipping off (ill. 2).

The new trademarked gripping function allows the scissors to be used for the sectioning of the suture and subsequent thread removal without requiring a second instrument (ill. 2).

46.319.17N

Suture Removal Scissors with retaining function for suture removal by Dentist Beck, micro-serrations, sharp/sharp, **ZEPF-Line**, curved, SpinLock, 17.5 cm

ImpacTray

acc. to PD Dr. Weng, Starnberg

The ImpacTray acc. to PD Dr. Weng makes micro as well as macro surgical operations possible in implantology, periodontology and augmentation surgery.

The amount of necessary instruments is reduced to a minimum by developing and putting together an efficient, mainly double-ended and partially exchangeable instrument set.

The set composition is illustrated on the following two pages.

24.971.00

ImpacTray complete set

ImpacTray acc. to PD Dr. Weng, Starnberg

The **ImpacTray Set** **24.971.00** incl. washtray consists of:

46.035.05 **PapillEx** Papilla Elevator acc. to **PD Dr. Weng**, Starnberg

The blunt working end of the PapillEx has a lenticular shape and allows gentle elevation of the tip of the papilla by turning the instrument while positioned adjacently to the cervical part of the tooth.

The sharp working end, which is slightly bigger, is used to remove the periosteum from the bone along the sulcular or vertical incision.

Both working ends are exchangeable and can be removed from the instrument shank if necessary.

41.015.17 **Micro Needle Holder**

Hold'n'Cut acc. to **PD Dr. Weng**, Starnberg, combined with scissors, SpinLock

The ImpacTray consists of:

Scale

ZEPF Crown-Spreading Pliers

The **HELMUT ZEPF** Crown-Spreading Pliers are perfectly designed for the spreading of crowns without pressure on the root and neighbour tooth.

The spreading function of these pliers guarantee a safe and anatomical correct application.

The power is not anymore transferred to adjacent teeth, roots or the jaw as with conventional crown spreading pliers.

19.277.01Z

Crown-Spreading Pliers by Bauer,
modified DBGM, 14.5 cm

Universal Forceps

These **HELMUT ZEPF** All-purpose Pliers should be on hand at any treatment unit. They may be used for securely grasping temporary plastic crowns, bridges, nerve instruments, stuck matrices, fixing inlays, setting interdental wedges, etc., and may be used on both upper and lower jaws.

Their tungsten carbide steel jaws provide a secure grip.

19.281.15TC

Universal All-Purpose Forceps,
TC, 14.5 cm

ZEPF Tele-Grip

Easy and thus precise adjustment!

There is always a demand for a precise and above all a sensitive adjustment of a Tele-Grip, to avoid a high tension (damage caused by deformation) in critical situations.

The previous function was only partly given, especially in bigger spreading ranges it was only possible under restrictive conditions. Thus, the durability was affected due to the resulting thread damages.

The **HELMUT ZEPF** Tele-Grip has a movable threaded bearing. As a result, the adjusting screw can be aligned easily and in a most sensitive way throughout the setting range.

gently opening in every position

Prosthetic Kit

Every day, you have to loosen all kinds of implant abutments in the practice / in the laboratory? In order to facilitate your work, **HELMUT ZEPF** has created a prosthetic set allowing you to loosen more than 90% of all screws available on the market.

All instruments are numbered and dispose of a RA-HEX connection. This means that these instruments can be used either in a contra-angle handpiece or in a ratchet.

Advantages Prosthetic Kit

In the RA-Hex-Adapter the inserts will be picked up.

RA-Hex Adapter inserted in ratchet. Shown with demounted handle for use as finger ratchet. Information: The RA-Hex-Adapter has a rotating finger rest available (see red arrow).

Among the recess for two RA-Hex-Adapters a socket for a comfortable removal of the screwdriver inserts from the RA-Hex-Adapter is located.

Optionally, the finger ratchet can be used with an extension piece. The set can also be completed by a torque wrench which is adjustable from 10-40 Ncm and has a fixation function to deactivate the torque.

The storage tray is made of stainless steel and contains a description of each individual screwdriver in order to facilitate the identification of the tools required for the respective screw. The tray fits into a basket and can be reprocessed reliably according to the RKI guidelines.

Scale

ZEPF *care* SYSTEM

The Modular Hygiene System

Flexible, efficient and approved safe. The **ZEPF**-Care Universal Silicone Profile allows an easy placement of the instruments after a surgery. For sterilization and cleaning, the instruments are inserted in the profile according to their diameter and are immediately secured.

Additionally, we have equipped the **ZEPF**-Tray and Basket-System with silicone base. Therefore the tray guarantees an anti-slip position and the stacking stability is improved at the same time.

Suitable for standardized sterilization containers, it's available in four different sizes for an ideal working potential. Placesaving, secure and very practical and with a removable lid.

10 ¹⁰⁻⁰² Maintenance

+49 (0) 74 64 / 98 88 0

Profile, low

The **ZEPF**-Care-System increases your efficiency, as you can assemble your trays in a process-oriented way and work accordingly. You will meet the requirements of the RKI and the accident prevention regulation. It doesn't matter whether you are cleaning your instruments manually or automatically.

Washtrays

1/3 178 x 90 x 24

1/2 178 x 135 x 24

1/1 275 x 178 x 24

1/1 275 x 178 x 24

Advantages

- The meshes of the bottom and the lid are designed in a broad shape. Consequently dead zones are minimized.
- The diagonal profile of the mesh simplifies the identification of the parallel arranged instruments in the profile.
- The meshes on the edge of the tray are designed in a narrow shape and thus enhance the stability of the tray.
- The risk of injury is reduced.

Profile, high, universal

Washbaskets

1/3 178 x 90 x 37

1/2 178 x 135 x 37

1/2 275 x 86 x 37

1/1 275 x 178 x 37

picture 1

Profile, high, universal
(example see picture 1)

intelligent

flexible

modular

Arranged in a practice-oriented way

As a result of the high and low configuration of the profile sections, the instruments can be placed in a space-saving way and can be removed easily.

It is possible to place two instruments above each other in one profile section. Contact of the instruments should be avoided in order to prevent contact corrosion.

Tip:

The following instrument combinations are **possible** should they contact each other:

- plastic / plastic ✓
- plastic / metal ✓
- titanium / titanium ✓
- titanium / metal ✓

In case of contact, the following instrument combination is **not possible**:

- metal / metal ✗

The modular concept of the three different lengths can be tailored according to your request.

The 'universal profile' is compatible with the 'low profile' in order to ensure a secure hold of different instrument diameters and variations.

For special cases, we recommend the assembly of our press pad in the lid.

There are no limits set regarding design of your personalized tray.

Aluminium Sterilization Container in 5 Sizes

Through the integrated filter in the lid and the base the Sterilization Containers are suitable for all steam sterilization methods:

- fractionized vacuum method
- fractionized steam method
- gravitation method
- pre-vacuum method

Different dimensions and stackability allow easy handling and optimal organization. The containers can be used for storing sterile goods and also for disposing contaminated instruments.

The newly developed latch system prevents accidental opening of the container and assures a simplified handling for the sterilization preparation.

The optimized sealing system assures a safe fixing of the filter.

85.703.00

System drill rack for max. 14 drills,
incl. mixing cup with lid and silicone
bushings

Brushes

with nylon bristles

PROBLEM: Metal brushes

They destroy the passive layer
of the instrument surface!

SOLUTION: Brushes with nylon bristles

85.903.01 double-ended, sterilizable, packing unit: 3 pieces

85.903.04 for aspirator Ø 3 mm and Ø 5 mm

85.903.03 for aspirator Ø 1.5 mm

ZEPF Medicine Cups

85.252.25

Medicine Cup, stainless steel,
Ø 60 mm x 27 mm high,
25 ccm

85.251.04

Medicine Cup, stainless steel,
with plastic lid,
Ø 40 mm x 30 mm high.
usable on both sides

85.251.03

Medicine Cup, stainless steel,
with plastic lid,
Ø 40 mm x 25 mm high,
usable on both sides

Medical White Oil
in a dispensing bottle and in an oil pen

24.950.12

Oil Pen, 12 ml

24.950.10

Dispensing bottle, 50 ml

Universal Toolbox for the ZEPF CMF SYSTEM

The universal tool box is used for storing the tools for the sets CMS + ARCS. The tool box offers enough space for the following items:

- Screwdriver handle, big and small, each with dental connection, in the new optimized ZEPF-Design. They have a socket for exchangeable blades of all different diameters. The use of the handles is easy and intuitive while changing the blades.
- The blade holder allows an extra secure fixing of the screw heads on the blade insert.
- The pilot drills and the slide hole drill both have a graduation to allow a safe depth orientation.
- The inserting assistant is used for areas with tight space conditions.
- The Pin Applicator 47.950.02 which fits in the screwdriver handles completes the set for fastening foils and membranes.

47.501.03

CMF-Box for Screw Systems
Ø 1.0 mm, Ø 1.2 mm and Ø 1.5 mm

47.950.02

Pin Applicator with dental connection

Screw Rack for the Universal Toolbox

The Screw Racks are available in the following configurations:

- **85.540.60** Screw Rack Ø 1.0 / 1.2 mm each 4 rows + 2 rows Ø 1.5 mm to accommodate 5 screws
- **85.540.65** Screw Rack Ø 1.2 / 1.5 mm each 5 rows to accommodate 5 screws

The packing unit for the screws is 5 pieces.

An easy identification of the screws is guaranteed by using the length markers in the tray.

The colored pin with length marking is assigned to the respective screw diameter, thus allowing the determination of the screw length and a clear lot traceability in the box.

85.540.65

Screw Rack Ø 1.2 / 1.5 mm
each 5 rows to accommodate 5 screws

85.540.60

Screw Rack Ø 1.0 / 1.2 mm each 4 rows +
2 rows Ø 1.5 mm to accommodate 5 screws

Washbasket for the ZEPF CMF SYSTEM

Following the Zepf-Care Series, the modularly composable components for the ZEPF CMF SYSTEM were developed, offering a washbasket with appropriate combination options.

The actual tools can be organized depending on the desired diameter.

This guarantees an RKI compliant reprocessing of the CMF SYSTEM.

85.195.00

Washbasket 1/1 as rack for the remaining components

Accessories for the Washbasket

Boxes

Dimensions 85 x 75 x 22 mm (L x W x H)

47.503.53

Screw and Pin Box for 2 x 5 screws Ø 1.2, 1 x 5 screws Ø 1.5, 10 membrane pins and a small storage space for instruments, membranes, bone plates etc.

47.503.50

Screw and Pin Box for 3 x 5 screws Ø 1.0, 10 membrane pins and a small storage space for instruments, membranes, bone plates etc.

47.503.10

Box for Screws Ø 1.0 mm

47.503.20

Box for receiving e.g. titanium plates

Scalpel Handle	08-14
Scalpel Handle / Blade	06-28 - 06-30
Scalpel Handle with scale	06-29
Scalpel Micro	06-29
Schäfer Retractor	06-15
Scissors	06-31 - 06-36
Screw Box	10-11
Screw Osteotome straight, VGO	07-16
Screw Inserts	07-07
Screw Rack	10-10
Screwdriver Handle	07-07
Secure-Line	05-14
Seldin Root Elevator	05-56
Semken Forceps	06-03
Semken-Taylor Forceps	06-02
Senior Matrix Retainer	04-23
Senn-Miller Retractor	06-13
Separating Disc	07-10
Shakibaie-M. Micro Sinus Aspirator	07-27

Shakibaie-M. Sinus Lift Set	07-25 - 07-27
Shank Inserts	07-07
Sharp Spoon	05-50, 06-20
Sharpening Oil	03-32
Sharpening Stone	03-33
Sickle Scaler bionik	03-22 - 03-23
Sickle Scaler stainless steel	03-27
Silicone Mouth Gag	06-08
Sinus Elevator	07-23 - 07-31
Sinus Instrument	07-23 - 07-31
Sinus Lift Set	07-25 - 07-31
Sinus-Line Aspirator	06-40 , 07-27, 07-29
Sliding Caliper	07-36
Small Extracting Forceps	05-26, 05-32
Soft Application Insert	04-04
Soft Tissue Hook	06-16
Soft Tissue Micro Instrument Basic Set	08-15
Spatula	04-10
Special Curette bionik	03-12 - 03-17
Special Curette stainless steel	03-24 - 03-25
Spencer Scissors	06-35
Spiculum Raspatory	06-23
Spina-Nasalis Retractor	06-17
SpinLock	08-04
Splint	06-44
Splinter Forceps	03-36
Spoon	07-23, 07-29, 07-31
Sterilization Container	10-07
Sternberg Lip Retractor	06-11
Stiller Sinus Lift Set	07-28 - 07-29
Storage Box for Pins	07-07, 07-33
Suction Cannula	06-41
Supercut	06-32
Surgical Aspirator	03-36, 06-40
Surgical Scissors	06-36
Suture Applicator	04-24
Suture Forceps	06-02
Suture Forceps Micro	08-10
Suture Removal Scissors	08-06
Syfrig Benex Extraction System	05-01 - 05-06
Syringe	06-41

T

Tampon Plugger	06-42
Taylor Scaler	03-23
Telecrown-Grip	09-06
Tele-Grip	09-02
Telescope Crown Pliers	09-05 - 09-06
Template, drilling	07-39
Tessier Mobilization Hook	06-13
Test Probe, Acryl	03-32
Thread Plugger	04-24
Tissue Forceps	06-02 - 06-06, 08-09
Tissue Forceps Atraumatic	08-10
Titanium Curette	03-20 - 03-21
Titanium Milling Part	07-21
Titanium Pin	07-33
Tofflemire Matrix Band	04-23
Tofflemire Matrix Retainer	04-23
Tongue Depressor	06-12
Torx	09-09
Towel Clamp	06-06 - 06-07
Tower Point Scissors	06-35
Towner / Jacquette Scaler stainless steel	03-27
Trephine	07-19 - 07-20
Tungsten Carbide	06-32
Tunneling Instrument	08-01 - 08-03

Tweezers	02-08 - 02-09
Tweezers anatomical	03-36
Twist-Ex Extracting Forceps Kit	05-18 - 05-19

U

Universal Crown Scissors	06-36
Universal Curette bionik	03-18 - 03-19
Universal Curette stainless steel	03-26
Universal Forceps	04-27 , 09-02
Universal Prophylaxis Set	03-14
Universal Titanium Curette	03-20
Universal Tweezers	04-27

V

Vestibulum Retractor	06-09, 06-18
VGO Ost-Set	07-14 - 07-17
Vienna Revolving Chisel	05-60
Vise	03-32
Vollmer Hammer	06-47 , 07-10
Vollmer Valentin Bone Splitting System	07-08 - 07-09

W

Washbasket	10-03
Washtray	10-02
Wax Carver	09-07
Wedge Applicator	07-10
Wedges	07-10
Weng Impac Tray	08-11 - 08-13
Weng Needle Holder	08-12
Weng Papilla Elevator	08-14
WHO Probe	03-10
Wieder Tongue Depressor	06-12
Williger Raspatories	06-19
Winter Root Elevator	05-61
Wire and Ligature Pliers	06-44
Wire Cutting Pliers	06-43 - 06-44
Wire Sizing / Ligature Pliers	06-44
Witzel Root-Splinter Forceps	05-16

X

Xcision Extracting Forceps	05-07 - 05-19
Xtool Luxation Elevator	05-41 - 05-48
Xtool Set	05-48

Y

Yildirim Drilling Sleeve	07-35
--------------------------	-------

Z

Zaufal-Jansen Bone Rongeur Forceps	06-25
ZEPF-Care System	10-01 - 10-07
Zepf-Line Periotome	05-51
Z-Shape Gracey M5 Prophylaxis Set	03-06 - 03-07
Z-Shape Handle	02-01
Z-Shape Sickle Curette	03-06 - 03-07
Z-Shape Sickle Scaler	03-06 - 03-07

Numerical Index

Pages 11-07 to 11-19

All medical devices according to the Medical Device Directive 93/42/EEC are marked with CE in the numerical index. All CE marked medical devices that have to be provided with the notified body are marked with * next to the CE mark, in the numerical index. The notified body is available through our latest valid certificates. These are available per request or download from zepf-dental.com.

Terms of Delivery and Payment

Helmut Zepf Medizintechnik GmbH

1. Offers and order acceptance

Our offers are always subject to confirmation and without obligation. Telephone and verbal agreements and arrangements with our agents shall become legally valid only after they have been confirmed by us in writing. Deviations in the orders of the buyers relative to our terms of delivery and payment shall not be binding for us, if we have not declared our approval in writing. The subsequent correction of potential errors in offers and invoices shall be permitted for us explicitly and in every case.

2. Delivery

All our data on delivery times shall be approximate only and non-binding.

3. Calculation

The prices agreed upon are net prices plus the respective legally applicable value-added tax.

4. Warranty

Within a period of one year we shall grant warranty for defects, which are caused by manufacturing or material faults. Potential defects shall have to be indicated to the supplier in writing immediately, at the latest, however, within eight days after receipt of the delivery. In case of justified notification of defects, the supplier shall be obligated to rework or replace as chosen. Any exceeding warranty claims, in particular for damage which has not been caused to the supplied goods themselves shall be ruled out, provided no intent or gross negligence can be substantiated. Our obligation of warranty shall not apply, if the defect or modification of the goods supplied is caused by incorrect intervention of the ordering or third parties. Moreover the warranty obligation shall not apply in case of incorrect handling or excessive wear of the goods by the ordering or third parties.

5. Packaging

If the order does not define the packaging, we shall choose the packaging at our discretion.

6. Delivery / shipment

The delivery is made ex works. The goods shall be transported to the place of destination always at the costs and risk of the buyer, no matter by which route and which means of transportation is chosen. The road tolls, provided they are not paid by us in case of freight-paid fob or cif deliveries, shall be borne by the buyer. Neither do we assume any obligation for delivery in time nor for the full utilization of loading capacity of the means of transportation. Moreover, the buyer shall bear the costs of the transport insurance.

7. Payment

Our invoices shall be due for payment without deduction within thirty days after invoicing. In case of payment within eight days we grant a discount of two per cent. Repairs and interest shall be payable immediately and without deduction. Cheques and bills of exchange shall be accepted only in lieu of payment, the latter only after previous arrangement. Costs for bills of exchange and discount charges shall be borne by the ordering party.

Payments shall be considered made as from the day, at which the supplier can avail himself of the invoiced amount in cash without any loss. In case of default in payment of the ordering parts we shall be permitted to charge default interest of 5 per cent above the respective basic interest rate of the European Central Bank as from the occurrence of default, and to declare due any amounts potentially deferred. Before complete payment of all invoices due including default interest, the supplier shall not be obligated to any further deliveries from a current contract. A complaint, even when justified, shall not permit the buyer to delay payment or to change the terms of payment.

8. Retention of title

Until complete redemption of all obligations from the business relationship, also of others and future businesses of the buyer with us, the goods supplied shall remain our property. For the duration of the retention of title of the seller, the buyer obligates himself to handle the goods correctly and with care. Within the framework of his normal standard business operation, the buyer may sell and process the goods. The claims of the buyer from the sales of the goods subject to retention of title shall be assigned to us now already until our claims from good delivery are paid off completely, irrespective of whether the goods subject to retention of title have been sold without or after processing or whether they have been sold to one or several buyers. The assigned claims serve as our security, however only to the value of the respectively sold goods subject to retention of title. The buyer is entitled to sell the goods subject to retention of title only in keeping with the agreement hereinbefore on the assignment of the purchase price claim. In case of seizure of the goods or the transfer of the purchase price claim to a third party in their place, the buyer is obligated to inform us immediately. We obligate ourselves to return or to transfer back the securities assigned to us at our discretion in keeping with the conditions mentioned hereinbefore, provided the value exceeds the claims to be secured by 20 per cent.

9. Place of performance and venue

The place of performance and venue shall be D-78532 Tuttlingen in Germany for all rights and obligations arising from the business relationship with us. The law of the Federal Republic of Germany shall apply exclusively for all legal matters under exclusion of the conflict of laws and the agreement of the United Nations on Contracts of the International Sale of Goods (CISG).

10. Data storage

We are permitted to save and process personal data of the ordering party.

11. Final clauses

The potential ineffectiveness of individual stipulations of these terms of business shall not affect the validity of the other stipulations.
